FOR IMMEDIATE RELEASE

Yes! Launches Solar Educational Seminar Series

Seminar series to include a wide range of topics from renewable energy and green building practices to energy efficient housing designs.

Roseville, CA -- Yes! Solar Solutions™ has launched its '08 calendar year Solar Education Seminar Series ahead of schedule with two sessions planned for November and December of this year. "Exploring the Solar Option" is the first installment in the new series and will be held at the company's new energy outlet located at 10100 Fairway Drive in Roseville on Saturday, November 17th 2007 from 11:00 am – 12:00 pm. The seminar will be held again on December 1st.

"Solar power in residential applications is a new concept for most people," said Jeff Winzeler, President Yes! Solar Solutions. "While most of us are very aware of the energy our automobiles consume and the options we have available to us to limit their fuel consumption, most homeowners are just beginning to awaken to the fact that they also have options when it comes to their home's energy consumption and that solar electricity can eliminate their annual household electricity expense," Winzeler pointed out. "The environmental benefits a photovoltaic solar system delivers are equally as impressive."

"Exploring the Solar Option" is the first in a series of seminars to be held at the company's new Energy Outlet in Roseville, CA. The seminar will introduce homeowners to the photovoltaic process that converts sunlight into electricity, the components of a typical system and their installation, as well as the economic and environmental benefits a system delivers. The seminar also features an overview discussion on California's renewable energy program, as well as the state rebates and federal tax incentives that are available, and provides an in depth discussion of the savings a system can provide.

"Yes! Solar Solutions brings a unique approach to the marketplace for both information and solutions for photovoltaic solar. The movement toward adopting more energy independent homes is just beginning

with more and more homeowners on a quest for information and solutions as they seek relief from rising energy costs,” said Mark Berman, Principle, Davis Energy Group. “Yes! Solar Solutions has both the resident expertise to provide that information, and a proprietary line of products to empower homeowners with.”

The seminar will be held in the new retail facility which has been specifically designed to provide visitors with a unique and informative experience. From the Yes! solar bar with its interactive animation and video content, to the product area where visitors can learn about solar products firsthand, the Yes! energy outlet offers a variety of features to educate visitors about solar power. It’s most popular feature however, is the solar design center where visitors’ homes can be viewed on a 52” flat panel color screen via satellite imagery. Using this tool, actual measurements of their homes can be taken from the images to enable an assessment of system requirements. The Yes! energy outlet has been designed to educate, involve and engage homeowners with Yes! Solar Solutions’ proprietary solar power systems which are designed to reduce or eliminate their electricity expense year round.

Updates to the seminar series schedule will be posted to the company’s web site at www.yessolarsolutions.com and on line registration is encouraged.

About Yes! Solar Solutions.
